ChemoMicrobiome provides oncology clinics with a clinical decision-support tool that uses ***patient-specific*** microbiome data to predict ***chemotherapy side effects***—driving better care and lower costs.

ChemoMicrobiome

Expected chemotherapy side effects:

Diarrhea: 10%

Nerve pain: 90%

Discontinue therapy: 10%

Business Thesis: ChemoMicrobiome provides oncology clinics with a clinical decision-support tool that uses ***patient-specific*** microbiome data to predict ***chemotherapy side effects***—driving better care and lower costs.

- Customers: Oncologists, cancer centers, and healthcare systems (payers)
- Product: Stool test predicts likelihood of chemotherapy toxicities
- Status quo: Standardized regimens cause preventable toxicity & subideal outcomes
- What we provide:
 - Anticipatory guidance for patients and clinicians
 - Personalized drug selection and dosing
 - Reduced side effect costs (ER visits, treatment change, hospitalizations)

Life Sciences Venture Canvas

Stakeholder →	Patient	Provider	Payor	Partner (pharma)	Permitter (e.g. FDA)
Who is this and how do they solve the problem now? (Customer Segment)	Limited involvement in drug selection Side effects without warning	Standardized treatment protocols Reactive management of side effects	Standard chemo for all patients Bears costs of side effects (ER, admissions, additional meds)	Trial recruitment based on diagnosis, not responders High attrition from side effects	Approve therapies based on broad categories Limited predictive diagnostics
What would motivate them to say YES to change? (Value Proposition)	Avoid debilitating side effects that jeopardize treatment Empowered with tailored care	Anticipate and mitigate side effects Improved treatment adherence	Reduce costs of side effects and ineffective treatment	Reduce heterogeneity in results Reduce trial attrition	Enhance safety and efficacy in outcomes

Planned interviews over the next week

Name	Role
Alexandra Hotca-Cho	Oncologist (CRC)
Wes Kidder	Oncologist (CRC)
Chloe Atreya	Oncologists (CRC)
Jonathan Chou	Oncologists (GU)
Marc Shuman	Oncologist
Alok G	Cancer Patient

Name	Stakeholder
Geetha Rao	Regulatory consultant at Springborne Life Sciences
David Pudwill	Former FDA regulatory
Neha Shende	Medical Advisor at Dr. Reddy's Laboratories
Renate Matzner	Business Manager at Biome Diagnostics
Derek S.	Strategy Manager at Exact Sciences
Herve Affagard	CEO of MaaT Pharma
Angelina Altshuler	Head of Development at Create Biosciences

Abbreviations: colorectal cancer (CRC), genitourinary (GU)
