Number of interviews since last meeting: **9**
Total number of interviews: **9**

ChemoMicrobiome provides oncology clinics with a clinical decision-support tool that uses ***patient-specific*** microbiome data to predict ***chemotherapy side effects***—driving better care and lower costs.

ChemoMicrobiome

Expected chemotherapy side effects:

Diarrhea: 10%

Nerve pain: 90%

Discontinue therapy: 10%

Questions asked

Oncologists

1. What are the most challenging problems your patients face?
2. Would you consider changing treatment if a non-invasive test indicated a high risk of toxicity?
3. What unmet needs do you see in personalizing treatment plans for your patients?

Business Development Managers at B2C microbiome companies

1. What are some of the biggest unknowns or questions you have about how your platform could help in oncology or chemo-related settings?
2. Have any clinicians, researchers, or patients approached you with questions or concerns about chemotherapy-related toxicity? How did you respond?

Insurers

1. What drives reimbursement plans and insurers decision-making?
2. Are diagnostics tools usually under reimbursement plan?

Customer Segment: Oncologists

Value Proposition: I'll bet oncologists want a way to be proactive about side effect management

Outcomes (1 interview):

- Main challenge in blood cancer is relapse after initial partial or complete response.
- “Toxicity is always a problem”, but patients are most concerned about whether their cancer is treated.

Next:

Test hypotheses for oncologists treating other cancer types

Customer Segment: Insurers

Value Proposition: I'll bet the payors for ChemoMicrobiome are the insurers

Outcomes (3 interview):

- For reimbursement a Cost-effectiveness test is necessary.
- B2C avoids reimbursement hurdles.

Next:

Include questions about current costs for oncologists, hospitals and patients.

Include questions regarding source of profit for B2C.

Customer Segment: Business Development Managers at B2C microbiome companies

Value Proposition: I'll bet it would be more sensible to target physicians for decision support

Outcomes (2 interview):

- Validated, physicians are the individuals with true buying power

Next:

Ask oncologists what they would need in a product for it to be irresistible

Customer Segment: Business Development Managers at B2C microbiome companies

Value Proposition: I'll bet there's an unmet need for clinical trial selection tools at pharma companies conducting clinical trials on oral fluoropyrimidines

Outcomes (2 interview):

- Pharma adoption is a potential avenue.

Next:

Need to speak more to pharma about their chemo selection tools

Life Sciences Venture Canvas

Patient

Provider

Payor

Partner
(pharma)

Permitter (e.g.
FDA)

Who is this and how
do they solve the
problem now?
(Customer Segment)

Limited
involvement in
drug selection

Side effects
without warning

Standardized
treatment
protocols

Reactive
management of
side effects

Standard chemo
for all patients

Bears costs of side
effects (ER,
admissions,
additional meds)

Trial recruitment
based on
diagnosis, not
responders

High attrition
from side effects

Approve therapies
based on broad
categories

Limited predictive
diagnostics

What would motivate
them to say **YES** to
change?
(Value Proposition)

**Avoid
debilitating side
effects that
jeopardize
treatment**

Empowered with
tailored care

**Anticipate and
mitigate side
effects**

Improved
treatment
adherence

**Reduce costs of
side effects and
ineffective
treatment**

Reduce
heterogeneity in
results

**Reduce trial
attrition**

Enhance safety
and efficacy in
outcomes

**Recommendation
from providers**

Planned interviews over the next week

Name	Role	Why?
Alexandra Hotca-Cho	Oncologist (CRC)	What are major unmet clinical needs? + current pipeline and costs + what would make a product irresistible?
Wes Kidder	Oncologist (CRC)	
Chloe Atreya	Oncologists (CRC)	
Jonathan Chou	Oncologists (GU)	
Marc Shuman	Oncologist	
Alok G	Cancer Patient	Are side effects a bug or a shark bite
Geetha Rao	Regulatory consultant at Springborne Life Sciences	Diagnostics vs software pathway
David Pudwill	Former FDA regulatory	Diagnostics vs software pathway
Renate Matzner	Business Manager at Biome Diagnostics	Is there a new avenue in B2C
Justin Fisher	Business Development at Savillis	Is there a new avenue in Pharma
Herve Affagard	CEO of MaaT Pharma	Why therapeutics and not diagnostics?
Angelina Altshuler	Head of Development at Create Biosciences	Is there a new avenue in B2C
